DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1 and 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Naruse et al (5,930,881).

1. Naruse et al teach a method of assembling a component in an assembly (20) (see column 10 lines 18-30, where it discloses assembling/aligning a vehicle wheel), comprising:

positioning the component in the assembly (20) in accordance with a proposed positioning in the assembly (20) (*see Figure 5, where it shows a vehicle wheel positioned onto a vehicle*);

sensing that the component is in its correct special position in the assembly by use of sensing means (76) capable of sensing spacing relationship (*see column 14 lines 41-54 and column 15 lines 35-48*);

communicating information regarding said position to an information processing means (*see column 14 lines 47-61*).

Naruse fails to teach wherein the sensing means is positioned in said component.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the position sensors of Naruse et al on the inside of the tires (within the boundaries of the component), because it will provide additional data of the vehicle wheel, including the camber and toe angles, thereby allowing for improved wheel alignment.

7. Naruse et al teach the method of claim 1, further comprising a step of displaying information communicated to the information processing means on information display means (*see column 14 lines 55-61, where it discloses displaying said information on a monitor*).

8. Naruse et al teach the method of claim 1, wherein the information processing means is a computer (*see column 14 lines 55-61*).

Response to Arguments

Applicant's arguments with respect to claims 1 and 7-8 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
